

Help us to fight back against the pain of Hidradenitis Suppurativa

The current situation in Hidradenitis Suppurativa (HS)

7.2 years Average time to be given a diagnosis ¹	1 approved medical treatment for moderate to severe HS available	40% of patients found this treatment did not relieve their symptoms (in a clinical study) ¹
20s, 30s & 40s Predominantly affects young women ¹ at a time when they may be particularly body conscious		Known to cause psychological stress, social stigma, problems at work ²

How the Ivy Study aims to move things forward

 3 possible treatment options will be investigated	 16 weeks of treatment	 1 x daily tablets	 10 clinic visits (including screening, baseline and follow-up visits)	 60 study centers worldwide	 OPEN Trial phase 2a worldwide

The Ivy Study may be right for you if:*

- you have a diagnosis of moderate to severe HS
- you are 18 - 75 years of age
- you have HS lesions in two different locations on your body

*There are other requirements for participation in the study. The study doctor will be able to explain these to you.
